

# Cloud Analytics and Data Masking

Making the Most of Machine Learning on the Public Clouds

**LIVE WEBINAR**

January 29, 2020

3:00 – 3:45 PM EST

## Matt Ferrari

Co-Founder and CTO  
ClearDATA

## Conor Colgan

Technical Product Manager  
ClearDATA

OVERVIEW

ABOUT THE SPEAKERS

TODAY'S AGENDA

This webinar provides attendees with an overview of machine learning services, and examples of outcomes from the AWS, Google and Microsoft Azure clouds. It will address challenges and opportunities in gleaning insights from large data sets. Presenters will also share what ClearDATA is doing to help organizations make the most of the machine learning and analytics available on the cloud by demonstrating how large data sets, previously bound by regulations because of PHI, can now be used for predictive modeling to gain better insights.

# the PROBLEM

**HEALTHCARE DATA IS GROWING** in both size and value at an exponential rate but remains bound by regulations and compliance.

Healthcare needs a way to access the data, and glean insights from it, while still protecting PHI.

# the SOLUTION

**DATA MASKING** with custom and flexible options can help free the data
